

Section 23 – Web Hosting

Answers

1. A
The other answers are incorrect because all what is mentioned can be done on other operating systems like Windows and MAC
2. A
3. B
4. A
5. C
6. A
By placing a number of records of different IP addresses all pointing to the same hostname, a round-robin DNS answer can bring about some load balancing
7. B
8. B
9. B
This line is only needed when you use name-based virtual hosts
10. A, and b
11. A, and b
12. B, and d
13. B
You can generate a self-signed certificate that does not need to be signed by a third-party for testing purposes or in a closed LAN environment where server identity is guaranteed
- 14.
