Linux Administration: Section 1 – where to start

Answers

1. b
   Although a system administrator should possess some of the programmer's skills like analytical thinking, he/she is not supposed to be working as a part time developer.
2. a
   While the other things are also important, ensuring that the media is suitable for restore is the most important one. Failing to restore a backup destroys the whole concept of saving data against loss.
3. c
4. b
   That's why we have all those books, and online documentation available for reference. In addition to the man pages.
5. b
6. b
   You can use them to search for documentation for system calls, configuration files, and drivers.
